Resources**

**Door Access  
Control**

## Jupiter Time and Attendance System

Jantek's Jupiter System is an automated time and attendance tracking solution for managing all aspects of your labor information needs. It automatically consolidates, calculates and processes your information for reporting and communicating directly to your payroll service or in-house payroll system. In addition, it will generate a wide variety of management reports upon which informed, timely decisions can be made. These reports can be sorted by company/division, by cost center or by department/job. Jupiter can go even more in depth to analyze your labor costs should the necessity arise.

## Data Collection Devices

### JTA350 Card Reader Terminal

Not only can the JTA350 be used for clocking IN and OUT, it can also be used to input department and job transfers. In addition, the terminal can display public and private messages. Employees can view their previous punches and request to see their total hours worked for the current pay period. Supervisor can add, delete, and view punches at the terminal using a supervisor badge.

### JTA250PC Terminal

Contains either a built-in proximity or magnetic stripe card reader. Two programmable function keys are available to record information such as job or department transfers, tips, and allows employees to view previous punches, and total hours for the pay period.

### PC Punch

Employees can punch from their PC! No time clock needed! PC Punch allows punching from a central PC or the employee's own workstation. Eliminate cabling and fussing with swipe cards. Employees simply enter their ID number and select IN or OUT.

### Web Punch

Let the power of Internet work for you. Web-Punch enables employees to punch IN and OUT through the Internet, in any time zone, anywhere in the world. Please visit [www.web-punch.com](http://www.web-punch.com) or [www.jantek.com](http://www.jantek.com) for more information.

### Wireless Web Punch

Employees can clock IN and OUT, and perform job or department changes using any Web-enabled cellular phone. This cost-effective addition to Jupiter makes it simple for anyone to register their attendance, from on-the-go business people to bus drivers to construction workers.

### Biometric Readers

Eliminates buddy punching! In cases where security and identification are major factors, Jantek has a wide selection of biometric data collection terminals available such as hand scanners and fingerprint readers.

### Telephone Punch

The Telephone Punch system allows employees to clock IN and OUT via a standard touch-tone telephone.

## Software Features

### Employees

With the Jupiter software, setting up employees is easy as can be: you can import them from existing employee databases or key the information in manually at the conveniently formatted entry screen. The Employee Edit screen groups together in pages all related information and provides links to other setup screens, allowing you easy access to policies, shifts, grouping levels, department or job definitions and more.

### Policies

Jantek's Jupiter offers maximum flexibility in setting up pay policies, covering as many rules as possible. The Policy Editor allows the setting up of policies in simple, step-by-step fashion.

### Scheduler

The scheduling tools in Jupiter simplify the task of scheduling employees. Schedules can be set up for individual employees or created for entire departments or job designations. Schedules can be based on employees' normal shifts, or copied from weekdays, other weeks or other employees. Schedules may also be generated from defined repeating day cycles.

### Auto Procedure

The Jupiter software can be set to execute sets of tasks such as data collection and reporting any times of the day or night. Procedures can be set to run hourly, daily, weekly, monthly, or at user-defined dates and times.

### Accruals

The Accruals module automatically calculates benefit hours such as sick and vacation time based on your company's policies and restrictions. The system performs availability checks when entering these hours at the time card edit screen, preventing the use and payment of hours not yet earned. Accrual reports display the number of hours accrued, earned, used, and available.

### Web Reports / Web Merge / Web Timecards / Web Pay Data

With Jantek's Web application modules, managers or supervisors don't need to be at the company's location to perform reports, upload branch time & attendance data to headquarters database, edit employees' timecards, or to enter pay data in any time zone anywhere in the world using a standard Web browser.
