

Swipe Clock

JTA-350PC Swipe Clock Terminal

The JTA-350PC is the standard data collection terminal for the Jupiter series of Time and Attendance and Job Costing systems. Employees use the terminals to punch IN and OUT, and to record department or job transfers.

- Automatic daylight saving time feature.
- Public and private messaging
- Total hours display for pay period when swiping IN or OUT
- PC based for stability, optional lockout and job costing functions
- Accepts barcode wand, slot reader, CCD & laser diode scanner
- Supervisor badge functions - add or delete punches, enter pay codes hours like vacation or sick time for employees
- Name verification - swiping displays the card holder's name (clock can store 1000 names)

Who's In? Who's Out?

CAPTURE

The swipe clock terminal can display multiple private and public messages via the large, easy to read LCD screen. Employees can request to see their total hours worked to date for the current pay period, and review previous punches. With more memory, stability and optional features than other clocks, this terminal is for companies serious about their employee's time.

SPECIAL FEATURES

- Optional lockout feature for preventing early punch-in and late punch-out (prevents unauthorized overtime) internal schedule holds 2 week lockout profile for each employee
- Can be used with electric locking systems to grant access to the facility or a secure area in the building with a valid swipe.
- Optional 14.4 kbps modem for remote site
- Optional Ethernet adaptor connects to your existing IPX or TCP/IP network
- Six programmable function keys that can be set for
 - Department or job transfers
 - Job changes
 - Opening doors
 - Viewing previous punch
 - Entering tips, bonuses or other earning pay codes
 - Displaying total hours
